Subject: RE: Meeting Minutes and Data Request Regarding HPNS

Kent,

Thank you for sharing your internal notes to our informal discussion although there is no requirement for approved minutes. However, our notes and recollections from the meeting are different. As stated at the meeting, the Navy's intent was to make sure TtEC was aware of the broad issues described in our Findings Reports, as TtEC's communication with the media to this point has not appeared to recognize the magnitude of the issue. I'm hopeful that there will be subsequent discussion between the Navy and TtEC to build on this initial conversation.

I'm gathering copies of the requested files and will be sending those to you on a DVD via FedEx by next week.

Thank you,

V/r,
Karen L. Barba, MBA

Subject: [Non-DoD Source] Meeting Minutes and Data Request Regarding HPNS
Importance: High

Karen,

Thank you for taking the time to meet with us on Thursday. We appreciated the opportunity to talk with you, Laura, Kim and Lawrence about the Hunters Point matter. Attached are our notes from the meeting. Please let us know if you have any comments or we've misinterpreted anything we discussed. I'd be happy to revise and reissue the minutes as needed.

Also, based on our conversation, we plan to provide to you by June 15 a response letter including details of Tetra Tech EC's (TtEC) offer to pay for an independent third-party to re-test all of the areas within TtEC's contract scope which were called into question in the Navy's draft reports. It is our understanding that you do not expect TtEC to respond individually to the Navy concerns with respect to each of the sixteen task orders listed in your May 1, 2018 letter.

As discussed in the meeting and noted in the minutes, Tetra Tech has a few data/info requests related to the Navy's reports. As such we respectfully request the Navy provide the items listed below:

- * With respect to the underlying site data, we request access to the same data files that the Navy considered in its reports. We understand that the Navy used input from Tetra Tech to create or revise a database that was used for the analysis prepared in these reports, so we would like to be able to use the same refined database that was used by the Navy to perform our further review.
- * We request copies of the native RData files that are referenced in Appendix A to the Navy soil reports (K-S Test Results); and
- * We request access to any database the Navy compiled or created using the information in the Data Evaluation Forms in Appendix C of the soil reports.

Please let me know if you have any comments or questions regarding this correspondence.

Thanks again,

Very respectfully,

Kent

Kent Weingardt, PE, PMP, CPCM | Vice President and Program Manager
